Top Management of the University

President's Message

Habtamu Abebe (PhD), President, Wachemo University

Dear readers of this magazine,

First of all, I would like to express my sincere gratitude for the opportunity to convey this message.

It is well known that the FDRE government is extensively working to ensure access to education and to provide quality education to all citizens of the country. Hence, the government has been playing a momentous role in increasing the number of higher education institutions in one hand, and increasing the number of students entering the university on the other hand. In order to maintain the tendency and interest of the students Ministry of Education divided the universities into three categories: Research Universities, Comprehensive universities and Applied Universities. Based on this, our university is one of the comprehensive universities with the mandate of Teaching, Learning, and Community Services and Engagements.

In the past years, the university has been intensively working hard to create conducive working environment for the university

community: teachers, students, and supportive staff in terms of teaching-learning, research and community service, construction of asphalt roads and main gate buildings, landscaping, and campus beautification and expanding internet infrastructure , recreation centers, staff residence buildings, expansion of recreational areas to beautify the student learning environment, Ct scan and Oxygen production machine plantation and other facilities at Queen Eleni Comprehensive Specialized Hospital, Launching of new research and technology centers and other large-scale projects. Accordingly, we were awarded trophies, medals, and certificates for excelling in the first level among comprehensive universities. I believe that those awards have given us a great motivation and encouragement for our future works. To accomplish better results in the future, I believe that, we will work together in a coordinated manner.

Dear readers

Although some of the tasks described above are preliminary, I would like to point out that there are a lot of works ahead of us to be done. Our university is on the verge of fulfilling its vision: to become one of the top 10 universities in Ethiopia by 2017. I would like to point out that this vision can only be achieved if all stakeholders work together in a coordinated manner.

I do not think there is anything that can prevent us from achieving our goals if we work in collaboration. It is clear that we have a lot of works ahead of us, and I have no doubt that we can make our university a better university if we all work hard and discharge our responsibilities.

Finally, I would like to express my sincere gratitude to the management of the university, academic staff, supportive workers, and various contributors who have contributed to the success of our work, and I wish you a happy reading.

Thank you.

Preface

Education is the basis of all development. All kinds of developments like political, economic, social, and technological are the result of the education developments. Without education, no kind of development can be achieved throughout the world. To ensure the benefit of citizens' in terms of education, for the last years, the FDRE government has been undertaking various educational reforms. One of those development reforms is the equitable expansion of education institutions and infrastructures throughout the country. Accordingly, the FRDE government is undertaking large-scale activities at the national level by opening higher education institutions and various educational programs to ensure access to education and respond to the educational needs of the people. As one of the education institutions' expansion projects, the foundation stone of Wachmo University was laid in 2003 E/C by the former Prime Minister of the Federal Democratic Republic of Ethiopia, Meles Zenawi (Pictured below)

The laying of this foundation stone solved one of the centuries-old infrastructure development questions of the Hadiya people and opened the new door to the other development projects. Dr. Solomon became the first president of Wachemo University. Following this, WCU has officially started the teaching and learning process in 2004 E/C with 538 students in 12 departments. However, the start of the teaching process was not an easy task because of the lack of teaching facilities and manpower. Regardless, at the time, the teaching and learning process was temporarily started in Hosanna College of Teacher Education and Hosanna Polytechnic College

Since it was in its infant stage, there were ups and downs in terms of infrastructure and manpower. Regardless of these facts, the first president of the University, Dr. Solomon Eyob has played significant role for the establishment of the university. After he served as President, Dr. Mandefero Eshetie, the second president of Wachemo University, was appointed as the President of the University and he successfully led the University for 3 years. The 3rd president of the university was Dr. Tassew Gebre. He took over the presidency and served as the head of the university for three consecutive years. All above mentioned presidents played significant role in the success of the university and contributed greatly for its current status. The 4th and current president of the university is Dr. Habtamu Abebe who has done and is doing great deal of works during his presidency. For this reason, this short communication basically discusses the reform activities which have been done during the presidency of Dr. Habtamu Abebe.

About the University

Wachemo University is one of the comprehensive public higher educational institutions established in 2004 E.C with the mandate of teaching, research, and community services. It is located 230 km southwest of Addis Ababa, at Hossana town in an area of over 200 hectares. The university is dedicated to providing quality education, conduct demand-driven research, and cater need-based community services. It is headed by the President and four Vice Presidents including Academic Affairs, Research and community services, Business and Development, and Students' Affair and Administrative. The University commenced its function in 2012 admitting 538 students in 12 departments under 4 colleges.

Currently, the University admitted over 27, 000 students in regular and continuing education programs in 54 departments under 6 Colleges and 3 Schools: Engineering and Technology, Natural and Computational Sciences, Medicine and Health Sciences, Agricultural Sciences, Business and Economics, and Social Sciences and Humanities and School of Law, School of Veterinary Medicine and School of Graduate Studies (SGS), respectively. In addition to this, the university has been launching new programs in both undergraduate and postgraduates.

The University has 1457 academic staff (36 are expatriates) more than 40 technical support staff and more than 1000 administrative staff. In addition to this, the university has launched its campus at Durame town (Kambata Tambaro Zone) about 100Km away from the Main campus, Nigist Elen Muhammed Memorial Comprehensive Specialized Hospital which is a teaching Hospital; found at Hossana town, Shone CEP center about 120km away

from the main campus, Homecho CEP center which is 38km away from the main campus, Gimbichu CEP center which is 32km from the main campus, Mudula CEP center about 105km from the main campus and Gilgel Gibe center which mainly focuses on Electrical and Power Engineering fields about 125km far from the main campus. In addition to this, it has been playing pioneering roles by reaching the community through research and community services. To mention some of them, it funds more than 130 research projects yearly along with other thematic research projects which spawn more than 3 years.

The number of academic staff involved in research and community services and the number of research and community services proposals/projects, which are sponsored by the university, have been increasing and broadening its scope from year to year. To reach the community through research and community services, the university has established seven Research and Technology Transfer centers in the catchment areas: main campus, Shone research center, at shone town, Lambuda research center at Lemo woreda, Buima research center at Misha Woreda, Shonkola research center at Soro Woreda, and Orcha research center at Mirab Soro Woreda.

To disseminate scholarly research outputs and findings to the stakeholders, the university has been working strongly to establish and launch the university's academic journal and already started some of the preliminary activities. It is believed that scholarly publishing is very important in research and academia. Hence, it aims to meet the publication and dissemination needs of locally emerging researchers, which in turn will increase the ranking of WCU in terms of research and community service within the competing peers. Quality and generic publishing promote and raise the overall profile of the institution and outstand-

ing scientific publishing and creative works at WCU will add to the global knowledge and increase acceptance in the global research community.

The other governing principle of the university is creating a conducive and attractive environment for all community members of the university. On top of this, the university provided residence houses with internet services for some of the academic staff in two sites at Hossana town and striving to build additional apartments within the main campus. Professional capacity building is the other mandate of the university. In this regard, it has been providing national and international MA and PhD degree opportunity for most of our academic staff. In terms of international relations, the university signed memorandum of understanding with Youth Fellowship (Korea), India and Free State University (South Africa).

Most importantly, the university has been working strongly to ensure peace and security to students by preaching the principle of “Unity in Diversity” where it boldly stressed peaceful co-existence, religious diversity, socio-cultural diversity, language diversity, various values and norms of the students. Thus, with the cumulative effort of the community members of the university, we ensured peace and security in the main campus, Campuses and CEP coordination Centers. Therefore, we proudly call our university “Peace Ambassador”.

Generally, in all these aspects, we believe that Wachemo University plays a pioneering role in making a valuable contribution to the overall development of Ethiopia in general and the catchment area in particular. Based on the above facts, the university is striving to become one of the top ten universities in Ethiopia and home of the brilliants by 2017 E. C. Therefore,

all the community members of WCU with their profundity and commitment are playing an immense role to achieve the university's vision, and mission along with its motto "Let Your Light Shine in the Society".

HEART Convention Awards

The first Higher Education Research, Technology, and Industrial (HEART) Convention under the theme “Towards Knowledge-Leading Economy” organized by the Ministry of Science and Higher Education in Addis Ababa from July 5 to 8, 2013 E/C. The objective of the convention was to discuss with all the Ethiopian Public Universities and teaching and Vocational, poly technique colleges the ways to explore knowledges and to generate innovative policy ideas in the fields of science, technology, and innovations.

Especially, the HEART convention has been organized to foster knowledge-driven society, to inculcate the culture of innovation, and technology that can be at par with the international standards in terms of technology and innovation, skills, and wisdom. According to MOSHE, the convention will continue to provide knowledge in the areas set by the government to see a prosperous Ethiopia. And for the future, it also will focus on improving and adding innovations.

The Minister of Science and Higher Education has awarded the trophy and Certificate of Recognition for those who have played a significant role in the innovation, and implementing efficient, and effective leadership strategies to create a conducive working environment in the teaching and learning process in the higher educational institutions of Ethiopia. Wachemo University has been labeled the first university, and has been awarded Trophy, Medal, and Certificate of Recognition among all the Ethiopian comprehensive/general universities for its outstanding performance in various fields. In addition to this, the President of Wachemo University, Dr. Habtamu Abebe, has been awarded Trophy, Medal and Certificate of recognition and declared the best second leader among all Ethiopian universities presidents for his efficient and effective leadership role.

To celebrate this the great achievement of the university, the whole university community warmly welcomed the top management of the university and presented various complements in order to retain and encourage their leadership qualities, and for the further achievements. In turn, the top management of the university expressed their deep concern and recognized every member of the university's contribution for this grand success. With their broad mind, they also appreciated that this success is the combined efforts of every member of the university. To celebrate this the great achievement of the university, the whole university community warmly welcomed the top management of the university and presented various complements in order to retain and encourage their leadership qualities, and for the further achievements. In turn, the top management of the university expressed their deep concern and recognized every member of the university's contribution for this grand success. With their broad mind, they also appreciated that this success is the combined efforts of every member of the university.

Some Reform Works at WCU (2011-2014 E.C)

There has been several reform works that are being accomplished at Wachemo University since the emerging of new leadership at 2010 E.C. The major reform works are in the area of constructions and infrastructures, good governance, academic programs expansion, Research and Technology Centres Expansion, National and International Public relations and attachments, peace and security and establishing attractive teaching learning environment, establishment of recreation centres, ICT infrastructure expansions for both the staff and students at large.

Infrastructures

Since the coming of the new leadership into seat, there has been handful of institutional transformations in the main campus and other campuses. To mention some of these reform activities, fence buildings (Main campus, Durame campus, Nigist Elleni Comprehensive Teaching Hospital, Research and Technology transfer centers, ICT infrastructure, Asphalt road Construction, Oxygen production machine plantation, students and staff cafeteria expansion and reconstruction, laboratory equipment installation and COVID-19 test machine purchase... etc. Campus infrastructure is evolving to support innovative approaches to

learning and teaching and other manoeuvres in the university.

ICT Infrastructure

Teaching and learning can further be improved by replacing of conventional teaching instead of the usual age old method of chalk and talk for teaching by innovative methods like power point presentations and animations, modelling and simulations, video clips and using AV aids, LCD projectors etc. In addition to this, ICT in administration of educational institutions play a major role in efficient utilization of existing resources and simplifies the administration tasks (e.g. in student administration, staff administration, general administration etc.) by reducing the paper work and replaces the manual maintenance of record keeping to electronic maintenance of records which helps in easy retrieval of any information of students, staff and general with in a fraction of seconds can access the required information. Furthermore, integration of ICT in higher education enhances the quality of research work and more number of individuals enrolled in the research work in various fields. ICT facilitates

the links across the world in all subject matter and made social networking. It saves time, money and effort to the researchers in their research studies.

By considering above mentioned facts, Wachemo University commenced to implement a huge project on ICT (broad band and Wi-Fi and broad band internet service at offices, dormitories and staff residences).

Moreover, surveillance camera is at different spots to control each and every movement. On the other hand, smart rooms, high tech resolution rooms, and other latest technology friendly infra-structures are under process.

Campus Security Camera

Asphalt Road Construction

Asphalt road construction is one of the major activities that the university's management planned to construct in the university to add value in the campus beatification and to provide conducive environment for the community of the university. This the asphalt road construction is on the verge of accomplishment. It is hoped that within one year its construction will be completed. It is believed that thus asphalt road construction will create conducive environment for students and staff members.

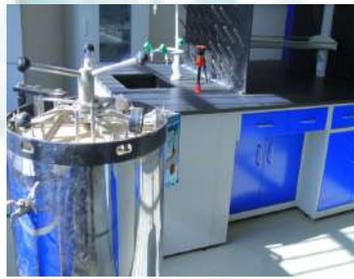

Campus Beautification

Campus beautification is not an option or a luxury in higher institutions; rather it is a mandatory section in transforming an institution. Accordingly, Wachemo University has brought remarkable changes in campus beautification, however still we remain with long ways to go. It is fair to think that teaching learning environment should be entertaining and attractive enough to be there.

Engineering Laboratory Building and Equipment

Currently, Engineering and Technology College takes a lion's share of attention of higher institutions. The college is assumed to be equipped with full-fledged facilities and equipment. There are different Engineering and technology laboratory infrastructures that are part of the reform works. The pictures elaborate more below.

Engineering and Technology Laboratory Building

Main Gate Building

What is seen at the main door of any institution takes the first impression of the new comers. Wachemo University was without proper main gate since its establishment in 2004 E.C., which was the concern of most of the staff members. In response to this, in 2011 EC the university top management passed the decision to begin the construction of the main gate along with the asphalt road. In fact, the design work had been done before the reform.

Old main gate

New main Gate

Administration Building

Construction of administration building is an indispensable task for the new reform in the university.

Presidential and Academic Staff Residential

The university has commenced to build presidential and staff residences at main campus.

Academic Staff Residence (under construction)

Fountains and Recreation Centres

The university built modern fountains, along with various recreation centres, have made the campus preferable and created a conducive environment not only for students but also for staff members as a whole.

Teachers and Students Cafeteria

Because of the increasing number of students in the university, it has become obligatory to expand student cafeterias.

Teachers' Lounge commencement ceremony Research centre Facilities at main campus and its expansions

To reach the community through research and community services, the university has established seven Research and Technology Transfer centers in the catchment areas: main campus, Shone research center, at shone town, Lambuda research center at Lemo woreda, Buima research center at Misha Woreda, Shonkola research center at Soro Woreda, and Orcha research center at Mirab Soro Woreda. Boyo research centre at Shshogo (underway)

Traditional Medicinal Plants Conservation and developments

Traditional Medicines are age old cultural disease treatment mechanisms in most of Ethiopian Societies. Long before the introduction of modern hospitals and clinics in Ethiopia, people have been using traditional medicines by using indigenous healing knowledge acquired through trial and error methods. The new road map on traditional medicine has defined traditional medicine as the sum total of knowledge, skills and practices on holistic healthcare, recognized and accepted by the community for its role in the maintenance of health and the treatment of

disease. Traditional medicine is based on the theory, belief and experiences that are indigenous to the different cultures, and that is developed and handled down from generation to generation. In the African region, this knowledge is handled down mostly by oral tradition.

In the Ethiopian context, a large segment of the population relied for centuries on a system of traditional or indigenous health care for treating various ailments. This is often linked to its multi-ethnic and cultural diversity coupled with the various physical environments which fosters an array of unique flora and fauna. Traditional medicine is an integral part of the local culture that is affordable and accessible even when there is demonstrably efficient and less costly alternative modern health care. Medicinal plants originated from traditional medicine are also obviously alternate candidate products as income source and improving the livelihood for the community. Traditional medicine could also contribute for the national economy through export of raw or processed medicinal plants for rendering foreign currency. Traditional medicine could contribute a significant role in the health care through improved policy, research and development efforts of multidisciplinary experts in integrated manner.

Ministry of Health recently has approved a policy that treats traditional medicines as alternative medicines. The approval of this new policy road map would serve as fertile ground for our research and community service works. It would a great input for the researchers who would do further work on the traditional medicinal plants. On the other hand, Wachemo University is committed to conduct a thematic research in the area by conserving traditional medicinal plants in the farms, and training the traditional healers. Therefore, this project proposal is aimed to do the conservation, thematic research, and community service works on traditional medicines that are found at Hadiya and Kembta Tembaro Zones and other areas as well.

There could be different reasons to execute this project at Wachemo University. First of all, traditional medicines are less researched field of studies as compared to other field of researches in our country. Secondly, Africa is the richest and most endowed continent with traditional medicinal plants which has been practiced for centuries. Thirdly, our university has got young and energetic staff members who are able to manage such project under different college.

Wachemo University has been designing and implementing various projects since its establishment. By now the university is vigorously working on traditional medicinal plants known as herbal medicine. This is a project that aims at conserving medicinal plants and conducting lab based researches on traditional medicinal plants found under the catchment area of Wachemo University in particular and outside the catchment as well. On the other hand, it is a project that will be implemented in collaboration with traditional healers, biodiversity institution experts, researchers, different governmental and non-governmental institutions.

Traditional Medicinal Plants Laboratory Test

Establishment of Cultural Museum

Cultural artefacts are the manifestation of the community's' indigenous talents. All the modern technologies have their base on the traditional practices. The ameliorations and improvement of these traditional practices has brought the modern technologies to the realities. Moreover, cultural heritages should be preserved. The next generations might not use the same tools; rather they may give a new fashion for the materials. The continuous change in the cultural materials will be a base for new innovations. To this end, it is indispensable to keep one's identity in the absence of a culture. Furthermore, cultural heritages should be well preserved so that they can be translated to the next generations. The next generation would develop a culture which would be totally different from their ancestors if their ancestors' culture is not preserved. Therefore, cultural heritages should be preserved, developed and promoted

Ethiopian Languages Project

- ❖ **Wachemo University is highly dedicated to design an easy way to learn any language, particularly Ethiopian languages.**
- ❖ **Language learning tools:**
 - **Multi lingual language learning books(English- Hadiyisa- Amharic) (offline)**
 - **Bilingual language learning books (English- Hadiyisa) (offline)**
 - **Mobile applications(English- Hadiyisa) (online)**
 - **Language learning website with audio version(English- Hadiyisa (online)**

Ethiopian Languages Project Presentation Library Organization

One of the major prioritized assignment of the university's top management was modernizing the laboratory and library by providing up to date equipment and facilities based on the needs of the students and academic staff members. Accordingly, the newly recruited top management organized them in a modern way and provided them with the necessary materials. As mentioned above, laboratory works are being organized by each college, which was not properly organized before. In addition to this, the library was organized with modern books, e- learning and digital library system.

Library Organization at the Main Campus (partial view)

Library Organization at the Main Campus (partial view)

Durame Campus

Much things have been done to organize the campus with man power, facilities and infrastructure. To mention some of this, additional classroom buildings, establishment of research and technology centre in the campus, provision of community based services.

Partial view of Durma Campus

Nigist Elleni Memorial Hospital

Transforming Nigist Elleni Hospital to Specialized comprehensive teaching hospital was one of the responsibilities which was laid up on the shoulder of the top management of the university. Additionally, the provision of the necessary services for the customers (patients) was another duty of the university. By considering these facts, the top management has conducted serious reforms in terms of manpower and facilities. Due to fact of this, the university purchased city scan machine, COVID-19 examination machine, community pharmacy, building of doctors' residence, additional buildings, and other health care facilities. Due to these reforms the university has got trophy and money award from Ministry of Health

Trophy Receiving Ceremony

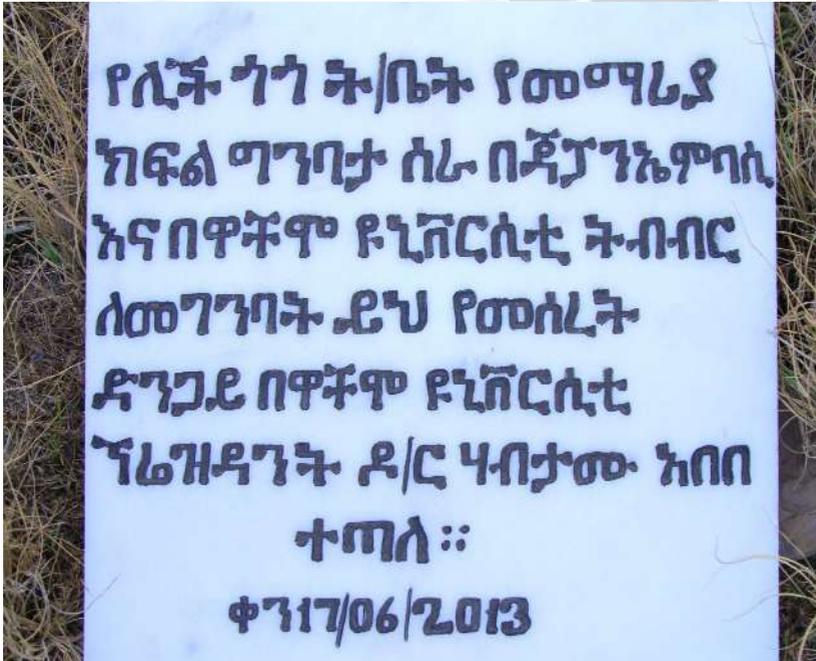

Certificate Award

Lich Gogo School

Lich Gogo School is one of the secondary school in Hadiya zone which is managed by the Hadiya Development Association department. The school accepts outstanding students from hadiya zone secondary schools. For its establishment Dr. Habtamu Abebe, WCU president, has played significant role in finding cooperating party from abroad. Accordingly, Japan Embassy in collaboration with WCU constructed modern school at Kidigisa Kebele.
